Index

Spring–Fall

1974

Abbe, Ernst, 325, 335
About, Edmond, 286, 288; his *Le Progres*, 285
Adams, Charles, 334
Allen, Garland E., 5; "Opposition to the Mendelian-Chromosome Theory: The Physiological and Developmental Genetics of Richard Goldschmidt," 49–92; on T.H. Morgan, 16, 17, 23
Altenburg, Edgar: experiments to support modifier gene concept, 64; and physiological implications of gene theory, 88; and the Morgan Group, 34–6, 41, 42, 43
American Philosophical Society, Meeting, Philadelphia, 1965, 101
American Society of Naturalists, Meeting, Ithaca, New York, Christman 1910, 15, 19
'Anlagetypus' (Johannsen), 12 ff.
Arber, Agnes, 168
Arnold Arboretum, Harvard University, 177
Astbury, W.T., 96
Avery, O.T., 97, 98, 104–5 ff., 104 n. 12

Bacon, Francis, 206, 254
Baglivi, Giorgio, 202 n. 82
balance theory (Bridges), 59–60
balance theory (Goldschmidt), 54–5
Baltzer, Fritz, 60
Barlow, Nora, 234; on Darwin's notebooks of the *Beagle* voyage, 311; her edition of Darwin's Ornithological Notes, 236 ff., 247 ff.
Barrett, Paul H., 220
Bartholomew, Michael, 235 n. 55
Bateson, William, 94, 168; original rejection of Morgan's chromosome theory, 32; on coupling and repulsion, 38, 40; coining the term "genetics," 31; 'idealist' stance of, 62, 83, 84; aversion to mathematics, 169, 172; defense of Mendelism, 141, 150
Bauer, H., 95
Baur, Erwin, 36
Bawden, F.C., 95
Beadle, George, 34, 43, 76, 77, 91, 106; 'one gene-one function' hypothesis, 97; on Garrod's enzyme work, 104
Beagle, voyage of, 220 ff., 223-232 ff., notebooks of, 223 ff.
Beaufort, Francis, 250
Belgovsky, M.L., 72
Bell, F.O., 96
Bell, Thomas, 243, 268 n. 28
Benzer, S., 116
Bernard, Claude, 300, 322
Berthelot, M., 297
biology: in France, 19th century, 275–300
biometricians, 8, 142, 336; Johannsen's objections to, 8, 19
Blackmore, Richard, 208
Blair, Patrick, 206 n. 99
Blyth, Edward, 301–3, 307–8; ques-

Journal of the History of Biology (1974) *All Rights Reserved.*

tion of his influence on Darwin's theory of natural selection, 309–17
Boerhaave, Herman, 200–8 ff; his *Aphorisms*, 200; his *Method of Studying Physick*, 200
Bohr, Niels, 82
Boivin, A., 97
Boivin-Vendrely Rule, 97
Bork, Alfred M., 336
Boulding, Kenneth, 161, 166
Boveri, Theodor, 18, 52
Boyle, Robert, 198
Bridges, Calvin B., 22, 25, 31, 91; balance theory of, 59; and the Morgan Group, 34–5, 39–48 *passim*; and non-disjunction, 33; reaction to Goldschmidt's time law, 60
Brocklesby, Richard, 180 ff., 189
Brooks, William K., 36
Brown, Robert, 241, 249 n. 100, 250, 254 n. 115
Brown, Theodore M., "From Mechanism to Vitalism in Eighteenth Century English Physiology," 179–216
Buckland, William, 241
Buffon, G.-L. Leclerc, Comte de, 300
Burkhardt, R.W., 290 n. 38
Butschli, Otto, 51

Carlson, Elof Axel, "The *Drosophila* Group: The Transition from the Mendelian Unit to the Individual Gene," 31–48
Carlyle, Thomas, 223
Caspersson, T., 94, 95
Castle, William, 15, 32, 40, 46, 47, 69; reservations on Mendelism, 43 n. 41; influence on Morgan's studies of *drosophila*, 36–7; selection experiments, 62, 63–5 f.
Catholic Church, and Darwinism in France, 284 ff.
Cattell, Eleth, 36
Challenger Expedition, 329
Chanticleer, voyage of, 250
Chargaff, Erwin, 97, 98, 106, 110
Charles Lyell, The Years to 1841: The Revolution in Geology, Leonard G. Wilson, 176
Charles Sprague Sargent and the Arnold Arboretum, S.B. Sutton, 177
Charleton, Walter, 194
Chase, Martha, 99, 106, 109
Chauffard, E., 279–80, 288; his *De la finalité dans les êtres . . .*, 280
Cheyne, George, 198–9 ff.; his *Philosophical Principles of Natural Religion*, 199, 203 n. 84
Chiloe, Islands of, 230
Chonos Archipelago, 230
chromosome theory of the gene (Mendel): definition of, 52 n. 6, 62; Goldschmidt's objections to, 50, 52, Morgan Group's elucidation of, 49 n. 2, 62
Churchill, Frederick B., "William Johannsen and the Genotype Concept," 5–30
Claparède, Edouard, 298–9
Clarke, Edwin and Kenneth Dewhurst, *An Illustrated History of Brain Function*, 342–3
Clausius, Rudolf, 158
Cleland, R.E., 33
Clements, Frederick E., 334, 335
Clift, William, 241
Cohen, I.B., 191 n. 45, 202 n. 83
Cold Spring Harbor, Meeting, May 1953, 100
Cold Spring Harbor Symposium, 1951, 80, 108
Coleman, W.H., 331 n. 41
Coleman, William, 84
Commoner, Barry, 136 n. 39
Company of Surgeons, 214
Comte, Auguste, 297
Conry, Yvette, 282
Correns, Carl, 52, 102
Covington, Syms, 238
Cowan, Ruth Schwartz, 144–5, 158, 160
Cowper, William, his *Mythomia Reformata*, 188
Coxiter, H.S.M., 331 n. 41
Crick, Francis H.C., 93, 100; on genetic specificity of DNA, 98; on amino acid sequences, 124
Cuénot, Lucien, 46

Cullen, William, 210 n. 110
Cuvier, Georges, 277 ff., 281, 300; *embranchements* of, 275, 277

DNA, 56, 93, 96, 110; its r-le in genetic specificity, 98; and reduction theory, 128–9; as transforming agent, 104 ff., Watson-Crick model of, 49, 93, 97–8
Dahl, Friedrich, 334
Dalton, John, 82, 83
Daremburg, Charles, 181 n. 9
Darwin, Charles, 86, 143, 158, 176, 217–58, 259–73, 275–300, 301–17; his *Autobiography*, 232 ff., 304; question of Blyth's influence on, 307–17; on continental drift, 270–1; his *Descent of Man*, 317; Diary of, 223 ff.; on the elevation of the South American continent, 230; loss of faith of, 232; his *Foundations of the Origin of Species*, 306; observations of the Fuegians, 227–9; on Galapagos finches, 259–63; on geographic distribution, 255–6, 267 ff.; and Hensen's earhworm data, 326; on hereditary units, 32; knowledge of Hoffman's work, 102; on human geography, 229–31; Johannsen's attack on, 19; his *Journal of Researches*, 224; his reading of Lyell's *Principles*, 257–8 n. 121; influence of Malthus on, 305–7, 316; views on man, 217 ff.; natural selection, theory of, 304 ff.; his *Origin of Species*, 260, 264, 272, 275–300, 307; Ornithological Notes of, 236–40; his 'pangenesis' theory, 144; on parasites, 229 n. 39, ignorance of phenotype/genotype distinction, 5; on politics, 220; on religion, 217–20; scientific ambitions of, 220–23; on species, 223, 235 f., 247 n. 94; specimen catalogs of, 237 n. 61; on stability of the species, 237, 240, 263; on Tierra del Fuego, 231; transmutation, theories of, 217–58, 259–72; Transmutation Notebooks of, 246 ff., 259, 260, 304; transportation and subsidence, theories of, 265–6 ff.; his *Zoology of the Voyage of H.M.S. Beagle*, 242 f.
Darwin, Erasmus (C. Darwin's brother), 221, 222, 223
Darwin, Erasmus (C. Darwin's grandfather), 217, 220
Darwin, Francis, 306
Darwin, Robert Waring, 217
Darwin and his Critics . . ., David L. Hull, 340
Darwinism, 16, 31; adaptation in, 296, 315; reception of, by French biologists, 276–300; supporters of, in France, 293–4
de Beer, Gavin, 314, 315, 316
De Candolle, Augustin, 305, 306
Delbrück, M., 91; analysis of mutation, 109; and phage replication, 93, 95; and reductionism, 136 n. 39
De Marrais, Robert, "The Double-Edged Effect of Sir Francis Galton: A Search for the Motives in the Biometrician-Mendelian Debate," 141–74
Demerec, M., 73, 76
Desaguliers, J.T., his *Lectures on Experimental Philosophy*, 204
de Saporta, Gaston, 282, 283
Descartes, Rene, 111, 186: his defense of Mendelism, 150; his *Treatise of Man*, trans. and ed. by Thomas S. Hall, 339–40
de Vries, Hugo, 6, 22, 86; his theory of intracellular pangenesis, 7, 19; his defense of Mendelism, 102, 150; Morgan's visit to laboratory of, 36; mutation theory of, 7, 32, 33, 66
Dexter, John S., 36
Down House, Kent, 224
Douglas, James, 206 n. 99
Dobson, Jessie, 192 n. 52
Doncaster, Leonard, 38
drosophila melanogaster: as subject of genetics research, 23, 25, 31–48; bar-eye condition in, 62, 67–70, illus. 67 fig. 3
Driesch, Hans, 15, 86
Dobzhansky, Th., 34; reaction to Gold-

schmidt's time law, 60; support of position effect hypothesis, 71
Bu Bois-Reymond, Emil, 276, 328
Du Cane, Mr., 163
Duncan, F.N., 36
Dunn, L.C., 160; on Galton, 146; on Goldschmidt, 89; on Johannsen, 6
Durkheim, Emile, 153

East, Edward, 21, 57
ecology (19th century), sampling methods in, 319 ff.
Egerton, Frank, 331 n. 41
Einstein, Albert, 82
Eisley, Loren, on Darwin and Blyth, 309–13 ff.
Emerson, R.A., 57
entelechy, 15
entwicklungsmechanik, 87, 88
Ephrussi, Boris, 76
Ephrussi-Taylor, Harriet, 107, 108
epigenesis, 277
l'evolution, 275, 291 f., 294; definition of, 277–8, distinguished from evolution, 278 n. 6; theoscientific nature of, 292
Ewan, Joseph and Nesta Ewan, *John Banister and His Natural History of Virginia, 1678–1692*, 176
Explorers of the Brain, Leonard A. Stevens, 343

Faivre, Ernest, 279, 282–3, 288–93 *passim*
Farley, John, "The Initial Reactions of French Biologists to Darwin's *Origin of Species*," 275–300
Feyerabend, Paul, 114–15, 115 n. 11
Fine, Arthur, 114 n. 9
Fisher, R.A., 33, 337
Fitton, William, 250
Fitzroy, Robert, 220, 227, 229, 244, 251 n. 108, 259, 270; his *Narrative of the Surveying Voyages of . . . Adventure and Beagle*, 227 n. 32, 261 n. 5
Flourens, Pierre, 279, 288, 293; his *Examen du Livre de M. Darwin*, 290
Focke, W.O., 101
Forrester, John, 192 n. 53
Foundations of Scientific Method: The Nineteenth Century, Ronald N. Giere and Richard S. Westfall, eds., 340–1
Fox, William Darwin, 218, 221, 249 n. 101
Freud, Sigmund, 173 n. 70

Galen, 186
Galenism: Rise and Decline of a Medical Philosophy, Owsei Temkin, 339
Galton, Sir Francis, 20, 142–74, 336; ancestral law of inheritance of, 150, 171; and fingerprints, 164; his *Finger-Prints*, 169, 172; his *Hereditary Genius*, 144, 159, 172; and heredity stability, 145 ff.; his *Human Faculty*, 173 n. 70; and the intercomparison method, 152 ff.; his *Natural Inheritance*, 142, 144, 152, 160, 169, 170, 172; and the 'ogive' curve, 154; experiments with Spencer's pangenes, 32; and composite photographs, 163–4; his law of regression, 7; stirp model of heredity, 7, 159
Garber, Elizabeth, 158 n. 30
Gardner, Eldon J., his *History of Biology*, 175
Garrod, Sir Archibald, 94, 101; his *The Inborn Errors of Metabolism*, 94; neglect of his discoveries on enzyme deficiency, 103 ff., 110
Gates, David Murray, 33
Gautrey, Peter, J., 231 n. 44, 234 n. 53, 246 n. 92
Gegenbaur, Karl, 51
Geldart, H.D., 307, 309
gene: changing definition of, 116, 116 n. 14; Johannsen's concept of, 14–15; Johannsen's introduction of the term, 12, 31; nucleoprotein theories of, 94–9
genetic stability, Goldschmidt on, 66
Genetics Society of America, Meeting, 1950, 80
genotype (concept), 5–28; defined, 5–6; Jennings' definition of, 20; Jo-

hannsen's 'vertical' concept of, 12 ff., 27; Morgan's 'horizontal' concept of, 22–3
Geological Society of London, 241
Giere, Ronald N. and Richard S. Westfall, eds, *Foundations of Scientific Method: The Nineteenth Century*, 340–1
Gilbert, Davies, 250
Gilbert, W., 136
Gillispie, Charles C., his *Genesis and Geology*, 287 n. 29
Glass, Bentley, *"The Long Neglect of Genetic Discoveries and the Criterion of Prematurity,"* 101–10
Glisson, Francis, his *Tractatus de Ventriculo et Intestinis*, 180
Goldschmidt, Richard, 49–92; background, 51–2; reaction to critics of his balance and time law theories, 60; his continuum model of the chromosome, 77–80; his *Einfuhrung in die Verberngswissenschaft*, 87; enzyme analogies of, 26; denial of gene boundaries, 72 ff., interest in gene function rather than transmission, 52; and gene theory, 81–91; his theory of structure of hereditary material, 73–81; linkage of heredity with physiology and development, 56–7, 77, 85; his *In and Out of the Ivory Tower*, 51 n. 4; acceptance of Mendel, 70; his *Physiological Genetics*, 61, 85, 89; denial of point mutation, 71–2; objections to position effect hypothesis, 71; work on sex-determination, 53–61; and variability of the gene, 65–6
Gould, Elizabeth Coxen, 242 f.
Gould, 239, n. 69, 242 ff., 259, 261–3
Grau, H.H., 333
Gravesande, W.J. Storm van s', his *Physices Elementa Mathematica . . .*, 206
Great Chain of Being, 277–8
Gregory, David, his *Astromiae Physicae et Geometriae Elementa*, 203 n. 84
Gresham College, 190
Grew, Nehemiah, his *The Anatomy of Plants*, 312
Griffith, F., 105, 110
Grinnell, George, "The Rise and Fall of Darwin's First Theory of Transmutation," 259–73
Grote, Arthur, 308
Gruber, Jacob, 251
Guerlac, Henry, 179 n. 1
Guizot, François, 289
Guyer, Michael, 56

Haeckel, Ernst, 16, 61, 283, 294, 328–30
Hagedoorn, A., 74, 95
Haldane, J.B.S., 33; objections to Goldschmidt's model of chromosome, 80; his *New Paths in Genetics*, 103
Hales, Stephen, 190 ff.; his *Haemastaticks . . .*, 179; his *Vegetable Staticks*, 191
Hall, Thomas S., 186 n. 27; trans. and ed. of Descartes' *Treatise of Man*, 339–40
Haller, Albrecht von, 181 f., 189
Hamburger, Viktor, 85
Harris, J. Arthur, 21
Harrison, Ross, 53 n. 7
Haurowitz, Felix: his template theory of protein synthesis, 96; his "microsomes," 96
Heberden, William, 183, 211
Heitz, E., 95
Henderson, Gerald, 315
Hensen, Victor, 319-37; background of 322–4; influence of, on other biologists, 333–35; sampling methods of, for plankton, 324–8, 331–3
Henslow, J.S., 221, 222, 241, 311
The Herb: Hashish vs. Medieval Muslim Society, Franz Rosenthal, 175
Herbert, Sandra, "The Place of Man in the Development of Darwin's Theory of Transmutation," 217–58
Herdman, W.A., 334
Herschel, William, 250
Hershel, John, 248
Hershey, A.D., 99, 100, 106, 107, 109
Hershey-Chase experiment, 99, 106, 110

Hertwig, Richard, 51
Hintzsche, Erich, 189 n. 38
Hippocratism, 209–11 ff.
History of Biology, Eldon J. Gardner, 175
History of Physiology, Karl E. Rothshuh, 344
Hjort, John, his *The Depths of the Ocean*, 333
Hoffmann, Hermann, 101, 102
Hoge, Mildred, 36
Holland, Henry, 245
Holton, Gerald, 82
Hooker, Joseph, 244 n. 83, 254 n. 116
Hope, William, 221
Hotchkiss, Rollin, 108
Hull, David L., 115 n. 13, 119–21, 125; *Darwin and His Critics* . . ., 340
Humboldt, Alexander von, 222, 229, 232; his *Personal Narrative* . . ., 226 n. 31, 227
Hunter, John, 181 ff., 189, 192 ff.
Hunter, William, 192
Huettner, Alfred Francis, 36
Huppert, K.H.H., his *Ueber die Erhaltung der Arteigenschaften*, 94
Hutton, James, 176
Huxley, Julian, 87
Huxley, T.H., 294
Hyde, Roscoe R., 36

iatromechanism, 179, 193 ff., 215–16
An Illustrated History of Brain Function, Edwin Clarke and Kenneth Dewhurst, 342–3
